Reference Letter for Huy Dinh

Darmstadt, 21.05.2018

Mr Huy Dinh (date of birth 04.01.1993) is enrolled in our International Master in Electrical Engineering and Information Technology, major Embedded Systems at the University of Applied Science since winter semester 2017/18.

Due to his good skills in programming he was offered a position as research assistant in my ZIM research project „Future Technology Multicore“ in October 2017.

Within this project, Mr Dinh has analysed the Zigbee transport protocol and has extended the driver to significantly improve the reliability of the communication link. Furthermore, he has worked on the very complex interrupt system of the Aurix Multicore to allow a more transparent configuration of the system both bare metal and under OS control.

Mr Dinh has proven to be a fast learner, works in a reliable and self-organizing manner and has performed his assignments to our full satisfaction.

Prof. Dr.-Ing. Peter Fromm
